

GIT PULL REQUESTS AND MERGING

By Hayder Ben Abdelhamid | June 2026

Project Overview: Collaborating with Pull Requests

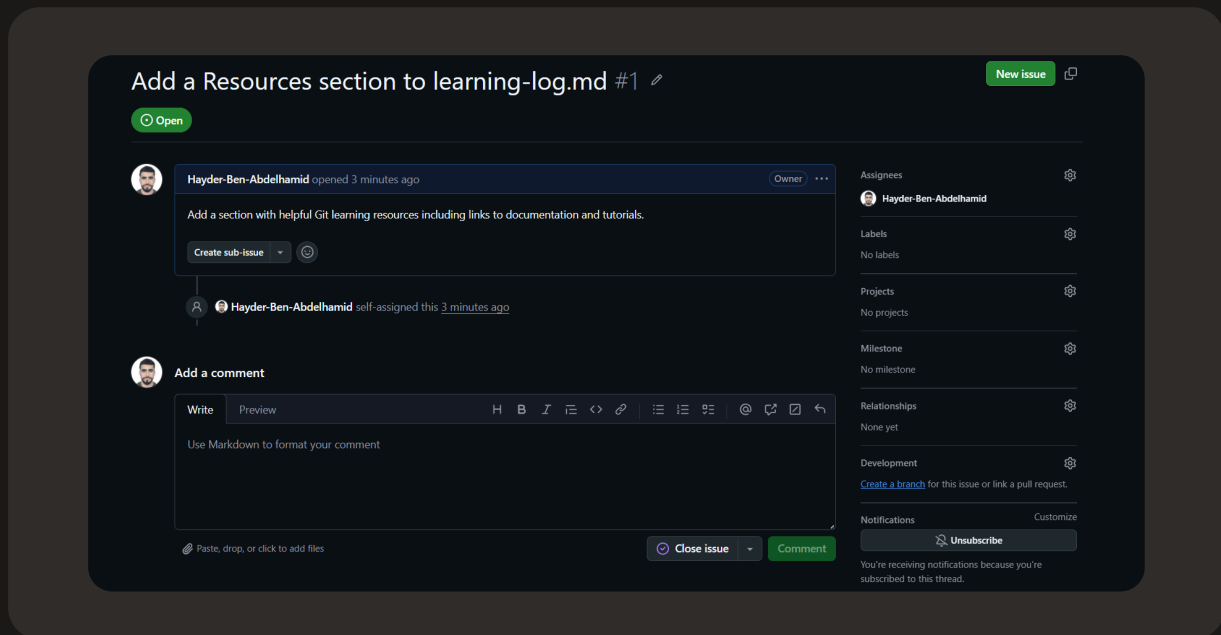

What this project is about

In this project, I'm using git to collaboration on a repo and I will be creating pull requests and merging update into the existing repo.

Planning Work with GitHub Issues

Syncing the repo and creating an Issue

In this step, I'm syncing all the changes from my remote repo and creating a GitHub issue so that I can assign the issue to myself and understand how things work.

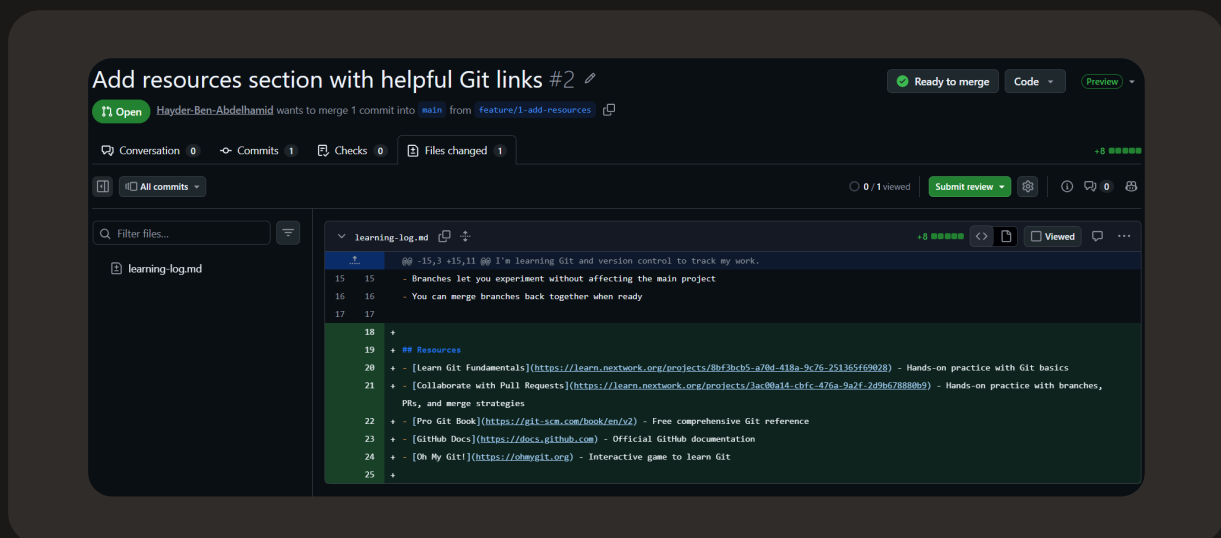

Issue number and planned feature

My Issue number is #1 and it plans to add a section with helpful Git learning resources including links to documentation and tutorials.

Building a Feature Branch and Opening a Pull Request

Creating the branch and PR

In this step, I'm creating a feature branch named after my issue. Add a resources section to my learning log and then commit and push. Open a pull request that links back to my issue.

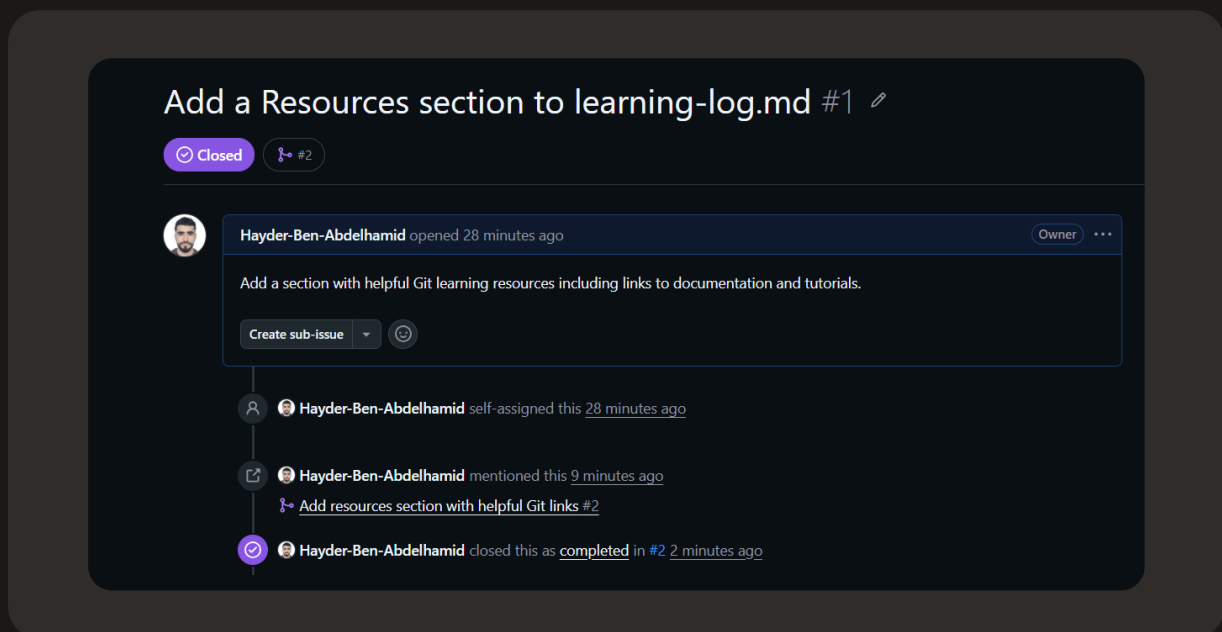

Linking the PR to the Issue

I added a Resource section to my PR body

Merging with a Merge Commit and Syncing Locally

Merging and pulling changes

In this step, I'm merging My pull request so that I can close issue one automatically. I will also sync the local main vbranch with the remot and delate the feature branch.

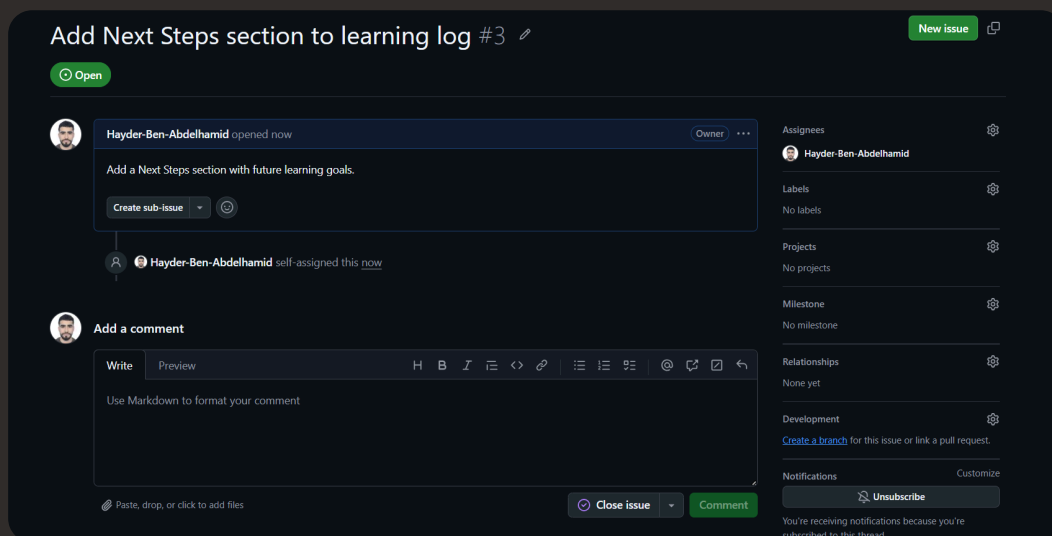

Merge strategy and auto-closing the Issue

I merged using the "Create a merge commit" option, which preserves the full history of your feature branch inside main. After that merge, Issue #1 was automatically closed.

Squash Merging a Second Feature Branch

Creating the second Issue and branch

In this step, I'm creating the second GitHub issue for my next feature. Put a feature branch with multiple small commits, and then open a pull request, squash merge it, and observe the difference in the log.

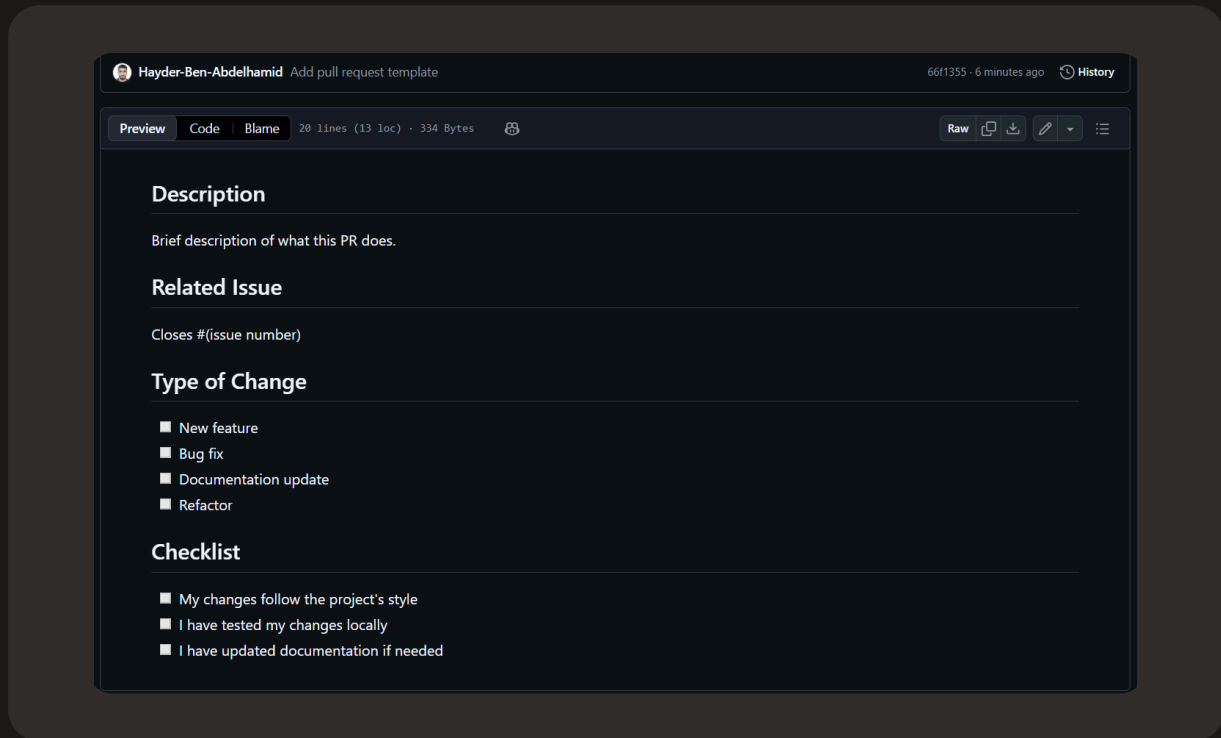

```
C:\Users\MSI\git-learning-log>git log --oneline
d2f0570 (HEAD -> main, origin/main) Add Next Steps section (#4)
f6269c6 Merge pull request #2 from Hayder-Ben-Abdelhamid/feature/1-add-resources
9a33fa2 Add resources section with helpful Git links
6fc87dc Merge add-resources branch and resolve conflict
f441b24 Rewrite learning notes with time machine analogy
0cdcc42 (origin/add-resources, add-resources) Expand learning notes on branches
edd530c Add What I Learned section
908a38a Add initial learning log

C:\Users\MSI\git-learning-log>git branch -d feature/3-add-next-steps
error: the branch 'feature/3-add-next-steps' is not fully merged
hint: If you are sure you want to delete it, run 'git branch -D feature/3-add-next-steps'
hint: Disable this message with "git config set advice.forceDeleteBranch false"

C:\Users\MSI\git-learning-log>git branch -D feature/3-add-next-steps
Deleted branch feature/3-add-next-steps (was 42fc527).

C:\Users\MSI\git-learning-log>git branch
add-resources
* main
```

Adding a Pull Request Template for Every Future PR

Why the template must live on the default branch

In this project extension, I learned that the template must be on the default branch because otherwise, it is hidden in the local branch.
